

Liner Drilling

Technical data

Material

PVC

Outside diameter

120 mm

Wall thickness

2.0 mm

Length

1'000 mm

Use

Liner drilling is used in **geotechnical exploratory drilling** when drill cores must be of the highest possible **undisturbed quality**.

It is also useful in **contaminated soils** to securely and cleanly package the drill core.

Advantages

Before drilling, the liner is pre-inserted into the core barrel of the **STUBORE® drilling system**. After completing the drilling process, the liner is removed and immediately sealed **airtight**.

Liner drilling with the STUBORE® drilling system guarantees both the **best possible sample quality** and its **protection from external influences**.
